The BrightScope/ICI Defined Contribution Plan Profile: A Close Look at ERISA 403(b) Plans, 2015

DECEMBER 2018
THE BRIGHTSCOPE/ICI DEFINED CONTRIBUTION PLAN PROFILE

The BrightScope/ICI Defined Contribution Plan Profile is a collaborative research effort between BrightScope and the Investment Company Institute that analyzes plan-level data gathered from audited Form 5500 filings of private-sector defined contribution (DC) plans, providing unique, new insights into private-sector DC plan design. The research draws from information collected in the BrightScope Defined Contribution Plan Database. The database is designed to shed light on DC plan design across many dimensions, including the number and types of investment options offered; the presence and design of employer contributions; features of automatic enrollment; the types of recordkeepers used by DC plans; and changes to plan design over time. ICI analysis of a random sample of DC plans with employer contributions provides detail on the structure of those contributions. In addition, industrywide fee information is matched to investments in DC plans, which allows analysis of the cost of DC plans. The BrightScope/ICI Defined Contribution Plan Profile supplements existing plan sponsor surveys and research based on recordkept data, and it is designed to increase public understanding in this critical area of retirement savings.

This report in the BrightScope/ICI Defined Contribution Plan Profile series focuses on ERISA 403(b) plans in 2015. It first analyzes 403(b) plans in the Department of Labor 2015 Form 5500 Research File. Focus then shifts to nearly 4,000 audited 403(b) plans in the BrightScope Defined Contribution Plan Database, which have at least $1 million in plan assets and typically 100 participants or more. For analysis of private-sector 401(k) plans, see The BrightScope/ICI Defined Contribution Plan Profile: A Close Look at 401(k) Plans, 2015 (March 2018), available at www.ici.org/pdf/ppr_18_dcplan_profile_401k.pdf.

Key Findings

» **403(b) plans are tax-advantaged retirement savings plans offered by public educational institutions, nonprofit employers (e.g., research foundations, hospitals, private educational institutions), and church organizations.** The study of 403(b) plans is complicated because plan sponsors span public and private sectors; in addition, some plans are subject to the Employee Retirement Income Security Act of 1974 (ERISA) and some are not. ERISA 403(b) plan assets account for nearly half of estimated total 403(b) plan assets. This report analyzes 403(b) plans covered by ERISA that also file Form 5500 Schedule H (typically plans with 100 participants or more) and have $1 million or more in plan assets (large plans) in 2015.

» **ERISA 403(b) plans represent an array of nonprofits, often hospitals or educational services.** Nearly half (48 percent) of ERISA 403(b) plan participants are in hospital plans, which held 35 percent of ERISA 403(b) plan assets in plan year 2015. Another 22 percent of ERISA 403(b) plan participants were in educational services, holding nearly half (47 percent) of ERISA 403(b) plan assets.

» **Most large 403(b) plans offer employer contributions.** In 2015, four-fifths of large ERISA 403(b) plans covering nearly three-quarters of large ERISA 403(b) plan participants had employer contributions.

» **Simple matching formulas, where the employer matches a certain percentage of employee contributions up to a maximum percentage of employee salary, were the most common type of employer contribution.** Among large ERISA 403(b) plans with employer contributions in 2014, 37 percent had automatic employer contributions, 60 percent had simple matches, and 16 percent had both of these features. The remaining 19 percent had tiered matches and other types of employer contributions.

» **A majority of large 403(b) plans reported participant loans outstanding.** Overall, 55 percent of large ERISA 403(b) plans had participant loans outstanding and about three-quarters of participants were in those plans in 2015. ERISA 403(b) plans with more participants or more assets tended to be more likely to have participant loans outstanding.

» **Large 403(b) plans often have employer contributions, participant loans outstanding, and automatic enrollment.** In 2015, 38 percent of large ERISA 403(b) plans both offered employer contributions and had participant loans outstanding, about 34 percent offered employer contributions only, and 2 percent had automatic enrollment and outstanding loans. About 7 percent of large ERISA 403(b) plans had reported evidence of all three activities. Larger plans tended to be more likely to have evidence of all three activities, rising to about one-sixth of plans with 5,000 participants or more.

» **Large 403(b) plans with automatic enrollment are more likely to have both employer contributions and participant loans outstanding than plans without automatic enrollment.** Three-fifths of large ERISA 403(b) plans with automatic enrollment also had both employer contributions and participant loans outstanding, compared with about two-fifths of plans without automatic enrollment.
403(b) plans offer employees a wide variety of investment options. The average large ERISA 403(b) plan offered 27 core investment options in 2015—of those, about 11 were equity funds, three were bond funds, and nine were target date funds. Nearly all plans offered domestic equity, international equity, and domestic bond funds. Eighty-one percent of large ERISA 403(b) plans offered a suite of target date funds, and 88 percent offered fixed annuities. Historically, 403(b) plans had few restrictions in their lineups of providers and investment options, and if all investments (no matter how small) in ERISA 403(b) plans are counted, large ERISA 403(b) plans had an average of 42 investment options in 2015. Investment options include mutual funds, variable annuities, and fixed annuities.

Mutual funds were the most common investment vehicle in large ERISA 403(b) plans, with 54 percent of large ERISA 403(b) plan assets in 2015. Variable annuities held 24 percent of assets, and fixed annuities held 22 percent.

Equity funds accounted for the largest share of assets in large ERISA 403(b) plans. In 2015, 43 percent of large ERISA 403(b) plan assets were held in equity funds, 22 percent was held in balanced funds (with most of that being held in target date funds), and 7 percent was held in bond funds. Fixed annuities accounted for 22 percent of ERISA 403(b) plan assets.

Target date funds have become more common in large ERISA 403(b) plans since 2009. In 2009, about half of large ERISA 403(b) plans included target date funds in their core investment lineups; this had risen to more than four-fifths of plans by 2015. Similarly, the percentage of participants who were offered core target date funds increased from 71 percent of participants to 84 percent between 2009 and 2015, and over the same period, the percentage of assets invested in target date funds increased from 7 percent to 19 percent.

Index funds are widely available in large ERISA 403(b) plans and represented 21 percent of large ERISA 403(b) plan assets in 2015. Index funds held the greatest share of assets in the largest ERISA 403(b) plans: about one-quarter of the assets of ERISA 403(b) plans with more than $500 million in plan assets were invested in index funds. Index funds, which tend to be equity index funds, generally have lower expense ratios than actively managed equity funds.

The BrightScope measure of large ERISA 403(b) total plan costs has decreased since 2009, looking at snapshots of 403(b) plan fees. In 2015, the average total plan cost was 0.71 percent of assets, down from 0.82 percent in 2009. The average participant was in a lower-cost plan, with a total plan cost of 0.57 percent of assets in 2015 (down from 0.68 percent in 2009), while the average dollar was invested in a plan with a total plan cost of 0.49 percent in 2015 (down from 0.59 percent in 2009). BrightScope’s measure of total plan cost includes administrative, advice, and other fees from Form 5500 filings, as well as asset-based investment management fees.

Mutual fund expenses in large ERISA 403(b) plans tend to be lower in larger plans and have trended down over time. For example, in 2015, the average asset-weighted expense ratio for domestic equity mutual funds was 0.65 percent for large ERISA 403(b) plans with $1 million to $10 million in plan assets, compared with 0.43 percent for plans with more than $1 billion in plan assets. Mutual fund expense ratios also have tended to decrease in large ERISA 403(b) plans between 2009 and 2015. Mutual fund fees are the total expense ratio as a percentage of assets.
Introduction

The Role of 403(b) Plans in US Retirement Planning

A 403(b) plan is an employer-sponsored defined contribution (DC) retirement plan that enables employees of public schools and universities, nonprofit employers, and church organizations to make tax-deferred contributions from their salaries to the plan. Individual accounts in 403(b) plans can be set up as annuity contracts through insurance companies; custodial accounts, which can invest in mutual funds; or “retirement income accounts” set up for church employees, which can invest in annuities or mutual funds, among other things. Employers also may make contributions into employee accounts. With $1.0 trillion in assets at year-end 2017, 403(b) plans have grown as a part of the US retirement system (Exhibit I.1).

Section 403(b) was added to the Internal Revenue Code in 1958, and the original regulations governing the plans were issued in 1964. It was not until 2007 that a comprehensive revision of the regulations effectively began to transform 403(b) plans from primarily employee-controlled individual-focused tax-deferred accounts to more formally developed plans, clarifying and expanding plan sponsors’ responsibilities. The 2007 regulations, which were generally effective after January 1, 2009, required all 403(b) plans to have a written plan for the first time. The new regulations imposed more stringent requirements for monitoring employee loans, hardship withdrawals, transfers, and other distributions.

These changes have made it more difficult for employers to maintain multi-vendor plans and have resulted in some plan sponsors doing comprehensive reviews of vendors and investment lineups with the aim of streamlining and monitoring their plans more closely. The new regulations also expanded the reporting requirements of 403(b) plans covered by the Employee Retirement Income Security Act of 1974 (ERISA). Typically, 403(b) plan participants direct the investment of their accounts. In a formal plan arrangement, the employer selects service providers and investment options, and participants choose from the lineup of options offered in the plan. If the plan falls under ERISA, the plan sponsor files a Form 5500 report with the US Department of Labor (DOL), typically annually. In other cases, the employer acts more as a conduit to allowing service providers to offer their investment choices to employees, and the employee selects a service provider and the funds or annuities offered in that provider’s lineup. As an example of this latter approach, data for 2018 for the 403(b) plan for public school employees in Texas indicate that the plan had more than 50 service providers and more than 10,000 investment options.

1. Annuities include all fixed and variable annuities held outside of retirement plans and IRAs.
2. Federal pension plans include US Treasury security holdings of the civil service retirement and disability fund, the military retirement fund, the judicial retirement funds, the Railroad Retirement Board, and the foreign service retirement and disability fund. These plans also include securities held in the National Railroad Retirement Investment Trust. The reported assets of federal pension plans for 2017 are adjusted for US Treasury financing activities undertaken after the legal limit on federal government borrowing was reached. These actions temporarily reduced the amount of Treasury securities reported on the balance sheet of the Civil Service Retirement and Disability Fund.
3. Other DC plans include 457 plans, private employer-sponsored DC plans without 401(k) features, and the Federal Employees Retirement System (FERS) Thrift Savings Plan (TSP).

Data are estimated.

Note: Components may not add to the total because of rounding.

The study of 403(b) plans is complicated because there is not comprehensive reporting across the wide array of plan sponsors. Plan sponsors span public and private sectors; in addition, some plans are subject to ERISA—for which there is comprehensive Form 5500 reporting—and some are not. ERISA 403(b) plan assets account for nearly half (46 percent) of estimated total 403(b) plan assets (Exhibit I.2).9

ERISA 403(b) PLAN

In this report, the term ERISA 403(b) plan refers to 403(b) plans filing Form 5500 with the Department of Labor (DOL). The large ERISA plans analyzed in this report are those with at least $1 million in plan assets and that filed Form 5500 Schedule H (typically plans with 100 participants or more).

Generally, 403(b) plans are offered by 501(c)(3) nonprofit employers; public school systems and universities; public hospitals; and church organizations. Private-sector, nonchurch nonprofits that are covered by ERISA must file the Form 5500 with the DOL. The BrightScope Defined Contribution Plan Database contains information from the audited Form 5500 reports for these ERISA 403(b) plans, and this report presents analysis of those data. The ERISA 403(b) plan universe holds nearly half of all 403(b) plan assets, and the large ERISA 403(b) plans analyzed in this report represent more than 90 percent of ERISA 403(b) plan universe assets.
403(b) plan sponsors cover a wide range of nonprofit business endeavors. ERISA 403(b) plan sponsors hail from 501(c)(3) nonprofit organizations including educational services (e.g., private schools and private universities); hospitals; other healthcare; social assistance organizations; religious, grantmaking, civic, professional, and similar organizations; arts, entertainment, and recreation; and other (e.g., research institutions) (Exhibit I.3). Educational services account for 24 percent of ERISA 403(b) plans and 47 percent of assets, while hospitals account for 48 percent of ERISA 403(b) plan participants and 35 percent of assets.

The Department of Labor Form 5500 Research File

ERISA 403(b) plans are required to file Form 5500 with the DOL and those filings contain information including the number of plan participants, assets held in the plan, and other plan features. The DOL makes available not only individual Form 5500 reports, but also a comprehensive database for the universe of ERISA 403(b) plans, which researchers can analyze. Small, medium, and large employers covering diverse workforces sponsor these plans, and they choose to design their plans to meet their unique circumstances. Chapter 1 of this report will discuss plan design with respect to automatic enrollment, employer contributions, and loan use across ERISA 403(b) plans.

Note: Business activity is based on Form 5500 codes for principal business activity. The exhibit includes the full Department of Labor 403(b) universe: 20,499 plans, 6.6 million participants, and $411.4 billion in assets (see Exhibit I.4). Components may not add to 100 percent because of rounding.

Source: BrightScope Defined Contribution Plan Database
The BrightScope Defined Contribution Plan Database

In order to better understand DC retirement plans, BrightScope has created the BrightScope Defined Contribution Plan Database, which is compiled by extracting information from audited reports filed annually by larger private-sector DC plans with the DOL. Generally, plans with 100 participants or more are required to file an audited report with the DOL. These reports generally contain information on the investments offered by the plan, assets in these investments, employer contribution structures, and design of automatic enrollment features. BrightScope also has included existing information from the Form 5500, which employer-sponsored pension plans falling under ERISA are required to file with the DOL annually. These filings contain important information about the plans, including the number of participants covered, total plan assets, and total contributions to and distributions from the plan. In addition, BrightScope has combined the audited data with outside data sources to incorporate the fees paid by 403(b), 401(k), and other DC plan participants associated with the investments in their plans. For chapters 2, 3, and 4 of this report, the additional detailed data from audited Form 5500 filings for nearly 4,000 ERISA 403(b) plans are analyzed (Exhibit I.4). For 2015, the BrightScope Defined Contribution Plan Database contains audited information on 18 percent of ERISA 403(b) plans, covering about 82 percent of ERISA 403(b) plan participants and 92 percent of ERISA 403(b) plan assets (Exhibit I.5). In addition, ICI analyzed employer contribution structures for a randomly selected sample of 3,132 large ERISA 403(b) plans for plan year 2014. This information was drawn from audited reports filed with the DOL, and the results are included in chapter 1.

(*) = less than 0.05 percent

Note: The sample is 3,734 plans with $380.2 billion in assets. Audited 403(b) filings generally include plans with 100 participants or more.

Source: BrightScope Defined Contribution Plan Database
Because 403(b) plans with fewer than 100 participants are generally not required to file the audited reports required of larger plans, the BrightScope Defined Contribution Plan Database does not contain many small plans. Though most ERISA 403(b) plans are small plans, most participants and assets are in larger plans. For example, although the sample analyzed contains information on nearly 4,000, or 18 percent, of the more than 20,000 plans in the DOL 403(b) universe, it contains $380.2 billion, or 82 percent, of the $411.4 billion in ERISA 403(b) plan assets (Exhibit I.4). Coverage rates in the database are higher for larger plans. Though the database contains audited information on only very few plans with less than $1 million in plan assets, more than 90 percent of plans with more than $1 million are included (Exhibit I.5). Coverage rates of ERISA 403(b) plans in the database grouped by number of plan participants tell a similar story, with larger plans much more likely to be included than smaller plans (Exhibit I.6).

Other detailed research on 403(b) plans has tended to focus on one provider or a particular specific group of plans, but the BrightScope database provides detailed insight into the wide cross section of ERISA 403(b) plans filing audited Form 5500 reports with the DOL. The BrightScope database also allows for analysis of the variation in mutual fund fees across different 403(b) plan sizes. In addition, by combining mutual fund expense data with expenses on other assets as well as other fees and expenses paid for the operation of 403(b) plans, BrightScope builds a total plan cost measure for many plans (see About BrightScope’s Total Plan Cost on page 43). This provides a comprehensive description of the range of fees and expenses incurred in 403(b) plans.

Research Agenda for This Report

This report primarily focuses on plan year 2015 from the DOL Form 5500 Research File and from the BrightScope Defined Contribution Plan Database, which contains details from audited Form 5500 reports, for plans that filed Schedule H (typically plans with 100 participants or more) and had $1 million or more in assets (large plans). This report presents data on how these large ERISA 403(b) plans are structured and the fees and expenses paid by 403(b) participants for these services. Chapter 1 reports information about automatic enrollment, employer contributions, and plan loans outstanding, primarily relying on the DOL 2015 Form 5500 Research File, although also including detailed analysis of a sample of large ERISA 403(b) plans’ employer contribution structures in plan year 2014. In designing their 403(b) plans, employers may choose to automatically enroll participants. The employer decides if and how much they will contribute to participants’ 403(b) accounts. In addition, they may include a loan feature in the 403(b) plan. This chapter explores the combinations of these activities and how they vary across large ERISA 403(b) plans.

Chapter 2 focuses on the structure of the large ERISA 403(b) plans, analyzing the number and types of investment options that participants have to choose from, as well as the investment options that the participants do choose. 403(b) plan design has been trending toward selecting a “core” investment lineup—reducing redundancies by limiting the number of providers and streamlining investment offerings. This core investment lineup also improves plan sponsors’ ability to monitor the plans. Thus, the main focus of this chapter is on investments likely reflecting current plan design—core investments, although plan participants may still be holding investments offered in the plan in the past. Because target date funds have continued to become more prevalent in large ERISA 403(b) plans over the past several years, this chapter explores how often they are offered in plans, what portion of plan assets are dedicated to these funds, and how these measures have changed in recent years. This chapter also explores the role of index funds in large ERISA 403(b) plan investing.

Chapter 3 analyzes fees paid to operate large ERISA 403(b) plans. BrightScope has built a total plan cost measure for plans with sufficiently complete information. Because participants and assets tend to be concentrated in larger plans, BrightScope’s total plan cost measure is analyzed for the average participant and the average dollar, as well as for the average plan. Then, because investment fees tend to be a significant portion of plan expenses and extensive information on mutual fund fees is available, the expense ratios of mutual funds in large ERISA 403(b) plans are presented, with a special focus on the variation in mutual fund fees across plan size and different investment objectives (e.g., equity funds, balanced funds, bond funds, money market funds, and other funds).

CHAPTER 1
ERISA 403(b) Plan Enrollment, Employer Contributions, and Use of Loans

When designing their 403(b) plans, employers make decisions regarding elements of plan design, including these key features:

- automatic enrollment of employees into the plan at a given contribution rate to encourage participation;
- provision of employer contributions (perhaps designing those contributions to encourage contribution of at least a certain percentage of salary from participants), eligibility for employer contributions, and vesting time frame; and
- access to plan assets through participant loans.¹⁷

These plan design features have an impact on employee experience with 403(b) plans, and the thinking on plan design has evolved. In addition to these plan design features, plan sponsors also select the lineup of investment options¹⁸ offered in the plan (which will be discussed in chapter 2).

Employer Plan Design Choices

Although participants generally choose whether and how much to contribute to 403(b) plans and what assets to invest in, employers are responsible for the plan architecture in which those decisions are made. For example, employers pick the investment choices to offer in the plan, whether to automatically enroll employees in the plan, whether to encourage participant contributions through an employer match, and whether to allow access to account assets before retirement. This chapter focuses on three such plan design features: automatic enrollment, employer contributions, and loans. Prior work has tended to focus on the availability of individual plan design features in isolation.¹⁹ However, plans are designed by selecting a package of features in order to attract and retain qualified workers. In order to understand the choices that employers make, this chapter extends earlier research by using data primarily from the DOL Form 5500 Research File to focus on the plan feature combinations that employers choose when designing their ERISA 403(b) plans.²⁰

DATA ON AUTOMATIC ENROLLMENT, EMPLOYER CONTRIBUTIONS, AND USE OF LOANS

This chapter’s analysis relies primarily on data from the Department of Labor 2015 Form 5500 Research File focusing on plans that filed Schedule H (typically plans with 100 participants or more) and had at least $1 million in assets (large plans).²¹ Determining the presence and amount of employer contributions relies on Form 5500 reports of the income statement of the ERISA 403(b) plans. The availability of a loan feature is not reported, but it is possible to determine whether any participants have loans using the balance sheet item on the Form 5500 for participant loans outstanding. Although technically, the loan analysis captures loan use rather than loan offering, because the analysis was narrowed to larger plans, it is likely that at least one participant in such plans offering loans would have a loan outstanding.
The Role of Automatic Enrollment

The adoption of automatic enrollment by many plan sponsors marks a significant innovation and change to ERISA 403(b) plan design. Employers can choose to automatically enroll employees in ERISA 403(b) plans, choosing a default initial contribution rate and a default investment, unless the employee indicates otherwise. The employee can then choose to opt out of the plan entirely, adjust the contribution rate or investment allocation, or leave the default options unchanged. Larger plans are more likely to report an automatic enrollment feature.

In 2015, nearly one-quarter of large ERISA 403(b) plans with more than $250 million in plan assets had automatic enrollment (Exhibit 1.1). Overall, 11 percent of large ERISA 403(b) plans reported they automatically enrolled participants. Because larger plans are more likely to have automatic enrollment, overall, 22 percent of large ERISA 403(b) plan participants were in plans with an automatic enrollment feature.

EXHIBIT 1.1
Larger ERISA 403(b) Plans Are More Likely to Automatically Enroll Participants

The sample is 5,833 large ERISA 403(b) plans with 5.7 million participants and $382.6 billion in assets. The results include plans that filed Form 5500 Schedule H (typically plans with 100 participants or more) and had $1 million or more in plan assets. Source: Investment Company Institute tabulations of US Department of Labor 2015 Form 5500 Research File.
**The Role of Employer Contributions**

Employers choose whether, how, and how much to contribute to their employees’ 403(b) accounts. Employers can choose to make contributions to their employees’ 403(b) plan accounts, either by matching employee contributions or by making automatic contributions without regard to employee contribution behavior. The DOL Form 5500 Research File data for large ERISA 403(b) plans indicate that employers made contributions in 81 percent of these plans in 2015, which has increased from 74 percent in 2009 (Exhibit 1.2).

**Percentage of participants in large ERISA 403(b) plans with employer contributions (by plan assets, plan year 2009–2015)**

Note: See Exhibit A.3 in the appendix for additional detail. The results include plans that filed Form 5500 Schedule H (typically plans with 100 participants or more) and had $1 million or more in plan assets. In plan year 2015, the sample is 5,833 large ERISA 403(b) plans.

When looking at plan size in terms of number of participants, larger ERISA 403(b) plans in the sample were slightly less likely than smaller plans to provide employer contributions. For example, in 2015, more than 80 percent of large ERISA 403(b) plans with 100 to 999 participants had employer contributions, compared with about 65 percent of large ERISA 403(b) plans with 5,000 participants or more (Exhibit 1.3, lower panel). Contribution activity varies less across large ERISA 403(b) plans analyzed by plan assets (Exhibit 1.3, upper panel).

### Exhibit 1.3

Source: Investment Company Institute tabulations of US Department of Labor 2015 Form 5500 Research File.
Employer contributions represent a significant portion of contributions flowing into large ERISA 403(b) plans. In 2015, $8 billion, or 29 percent of total contributions into large ERISA 403(b) plans, were employer contributions (Exhibit 1.4). Employer contributions have represented a relatively steady share of contributions over the past several years; in 2009, 32 percent of contributions were employer contributions.

Note: The results include plans that filed Form 5500 Schedule H (typically plans with 100 participants or more) and had $1 million or more in plan assets. In plan year 2015, the sample is 5,833 large ERISA 403(b) plans. Employee contributions contain a small amount of contributions from others, which includes rollovers into 403(b) plans. Employer contributions include a de minimis amount of noncash contributions.

Source: Investment Company Institute tabulations of US Department of Labor Form 5500 Research File
There is only slight variation in the share of employer contributions in total plan contributions by ERISA 403(b) plan size. Among large ERISA 403(b) plans, the share of employer contributions in total plan contributions ranged from 26 percent for plans with more than $250 million to $500 million in plan assets to 32 percent for plans with more than $10 million to $50 million (Exhibit 1.5).

TIMING OF EMPLOYER CONTRIBUTIONS

If employers offer contributions to employees, they can choose to impose a minimum service requirement before employees are eligible to receive the contributions. Employers also can choose to implement a vesting schedule, where employees forfeit some or all of the employer contributions in their accounts if they leave the employer before a specified length of time. (Employees are always 100 percent vested in their own contributions.) The most common combination of contribution eligibility and vesting for plans with employer contributions—37 percent of large ERISA 403(b) plans in the sample—was for employees to receive employer contributions after a year of eligibility, but to be immediately vested in those contributions (Exhibit 1.6). Overall, 63 percent of large ERISA 403(b) plans had immediate vesting, and 62 percent of plans made employees eligible for employer contributions after one year.

Source: BrightScope Defined Contribution Plan Database
TYPES OF EMPLOYER CONTRIBUTIONS

Employers choosing to make contributions to their employees’ 403(b) plan accounts can choose either to match contributions made by the employees or to make contributions regardless of employee contributions. If the employer chooses to match employee contributions, the options include a simple match formula, a tiered match formula, or a maximum dollar match formula. With a simple match formula, employer contributions are matched up to a fixed percentage of salary (for example, the employer matches 50 percent of employee contributions for the first 6 percent of the employee’s salary, for a maximum employer contribution of 3 percent of the employee’s salary). With a tiered match formula, different levels of employee contributions are matched at different rates (for example, matching 100 percent of the first 4 percent of salary contributed and 50 percent of the next 2 percent, for a maximum employer contribution of 5 percent of the employee’s salary). With a maximum dollar match formula, employee contributions are matched up to a given dollar threshold (for example, matching 50 percent of the first $2,000 in contributions, for a maximum employer contribution of $1,000). Analysis of the types of employer contributions is based on a sample of 3,132 large ERISA 403(b) plans in 2014, drawn from the sample of large ERISA plans with employer contributions.23

In 2014, six in 10 of the large ERISA 403(b) plans analyzed (a random sample of those with $1 million or more in plan assets that filed Form 5500 Schedule H and had employer contributions) had a simple match formula, 37 percent made automatic contributions without respect to employee contributions, and 16 percent had both a simple match formula and automatic contributions (Exhibits 1.7 and 1.8). Larger ERISA 403(b) plans with employer contributions tended to be more likely to make automatic contributions, while the percentage offering simple match formulas varied less by plan size. In addition, 5 percent of large ERISA 403(b) plans with employer contributions had a tiered match formula, and 1 percent of 401(k) plans matched employee contributions up to a maximum dollar amount (Exhibit 1.8).24

SIMPLE MATCH FORMULAS

For simple match formulas, the employer chooses the percentage of employee contributions to match, as well as the maximum contribution percentage to match. Among the 60 percent of large ERISA 403(b) plans with employer contributions that had a simple match structure, the most common formulas matched 100 percent of contributions up to some percentage of employee salary, with 57 percent of large ERISA 403(b) plans with simple matches using this structure in 2014 (Exhibit 1.9, upper panel). About 10 percent of these plans matched 100 percent of employee contributions up to 5 percent of employee salary, as well as up to 4 percent, up to three percent, and up to somewhere less than 3 percent. Another common simple match formula was a 50 percent match of contributions up to 6 percent of employee salary, in 8 percent of the large ERISA 403(b) plans with simple match formulas. Altogether, 25 percent of large ERISA 403(b) plans with simple match formulas matched 50 percent of employee contributions up to some percentage of employee salary. However, participants in large ERISA 403(b) plans with simple match formulas were slightly more likely to be in plans matching 50 percent of employee contributions (44 percent of participants) than in those matching 100 percent of employee contributions (39 percent of participants) (Exhibit 1.9, lower panel). In 2014, 19 percent of participants in large ERISA 403(b) plans with simple matches had a matching formula of 50 percent up to 6 percent of salary.

* Other includes plans with matched deferral percentages in between the categories listed (for example, 3.5 percent).
(\(^*\)) = less than 0.05 percent

Note: Plans with no employer contribution, maximum dollar contributions, tiered match formulas, or only a nonmatching contribution were excluded. The sample is the 60 percent of plans with employer contributions that had simple match formulas (see Exhibit 1.7). The results include plans that filed Form 5500 Schedule H (typically plans with 100 participants or more) and had $1 million or more in plan assets. For plans with multiple match formulas, the formula determined to be the most representative was used for this analysis. Row and column percentages may not add to the totals because of rounding.

EMPLOYER MATCHES CAN VARY WITHIN A PLAN

Employers can choose to make different plan contributions to different employees based on factors other than the employee’s own contributions. For example, contributions can differ by employee tenure (including employees hired before or after a set date), employee age, employee group (for example, employees under or not under a collective bargaining agreement or in different units or geographic locations), or employee income (including plans that are integrated with Social Security). 25 In 2014, nearly one-quarter of large ERISA 403(b) plan participants in plans with employer contributions were in plans that provided different levels of employer contributions based on individual employee characteristics (Exhibit 1.10). This included 14 percent of participants in plans with employer contributions that varied their employer contributions by employee tenure, 7 percent of participants in plans that varied contributions by employee group, 5 percent of participants in plans that varied contributions by employee income, and 3 percent of participants in plans that varied contributions by employee age. Participants in larger plans were more likely to be in plans that varied employer contributions based on individual employee characteristics. For example, more than 20 percent of participants in plans with employer contributions and 500 or more participants were in plans that varied their employer contributions, compared with about 11 percent of participants in plans with fewer than 100 participants.

The Use of Participant Loans

Employers also may consider whether to allow access to 403(b) account assets before retirement through a loan feature. In plans that offer loans, participants can take a loan from their own accounts, subject to plan limits. Participants must then repay their loans, plus interest, into their accounts within a set period of time. Although participants typically must pay any loans back shortly after leaving their employers, which can lead to defaults, the existence of a loan feature may encourage workers to sign up for the plan in the first place, or to defer more of their salary into the plan. It is possible to determine if a participant has taken out a loan by gathering data on participant loans outstanding, which are part of the balance sheet reporting on the Form 5500. Because it is more likely that at least one participant has a loan outstanding in larger plans than in smaller plans, the loan use analysis is limited to large ERISA 403(b) plans.

In 2015, 55 percent of large ERISA 403(b) plans had participant loans outstanding (Exhibit 1.11). Larger ERISA 403(b) plans as measured by the number of plan participants tend to be more likely to have loans outstanding than smaller ERISA 403(b) plans. More than 70 percent of large ERISA 403(b) plans with 1,000 participants or more had participant loans outstanding, compared with about half of large ERISA 403(b) plans with 100 to 499 participants. Because larger ERISA 403(b) plans in the sample were more likely to have participant loans outstanding, more than three-quarters of ERISA 403(b) plan participants in the sample were in plans that had loans outstanding. Even though loans are widely available, the amounts borrowed represent less than 1 percent of large ERISA 403(b) plan assets.

EXHIBIT 1.11
Many Large ERISA 403(b) Plans Have Participant Loans Outstanding

![Bar chart showing the percentage of large ERISA 403(b) plans and percentage of participants in large ERISA 403(b) plans with participant loans outstanding by plan assets, 2015.]

![Bar chart showing the percentage of large ERISA 403(b) plans and percentage of participants in large ERISA 403(b) plans with participant loans outstanding by number of plan participants, 2015.]

Note: The sample is 5,833 large ERISA 403(b) plans with 5.7 million participants and $382.6 billion in assets. The results include plans that filed Form 5500 Schedule H (typically plans with 100 participants or more) and had $1 million or more in plan assets. A plan was determined to allow participant loans if any participant had a loan outstanding at the end of plan year 2015.

Source: Investment Company Institute tabulations of US Department of Labor 2015 Form 5500 Research File
ERISA 403(b) Plan Activity Combinations

When designing their compensation structures, employers choose a combination of wages and benefits to attract qualified workers. Similarly, employers design 403(b) plans by selecting a combination of features that their employees are likely to value. Most of the sample of nearly 6,000 large ERISA 403(b) plans included at least one of the three activities explored in this research. Across the sample of ERISA 403(b) plans in 2015, only 8 percent did not offer employer contributions, did not automatically enroll employees, and did not have participant loans outstanding (Exhibit 1.12). The most prevalent configuration of plan activities was employer contributions and outstanding loans, which was observed in 38 percent of ERISA 403(b) plans in the sample. Another 34 percent of ERISA 403(b) plans had employer contributions only, and 9 percent had outstanding loans only. The remaining ERISA 403(b) plans in the sample had other configurations of the three features.

Larger ERISA 403(b) plans tend to be more likely to have employer contributions, participant loans outstanding, and automatic enrollment. Sixteen percent of large ERISA 403(b) plans with 10,000 participants or more had employer contributions, participant loans outstanding, and automatic enrollment, compared with fewer than 5 percent of plans with fewer than 500 participants. Overall, about 7 percent of large ERISA 403(b) plans had reported evidence of all three activities.

EXHIBIT 1.12
Large ERISA 403(b) Plans with Selected Plan Activity Combinations
Percentage of large ERISA 403(b) plans with selected plan activity combinations by number of plan participants, 2015

Note: The sample is 5,833 plans with 5.7 million participants and $382.6 billion in assets. The results include plans that filed Form 5500 Schedule H (typically plans with 100 participants or more) and had $1 million or more in plan assets. Plan design features include employer contributions, automatic enrollment, and participant loans. A plan was determined to allow participant loans if any participant had a loan outstanding at the end of plan year 2015. Components may not add to 100 percent because of rounding. For additional detail and analysis by plan assets, see Exhibit A.1 in the appendix.

Source: Investment Company Institute tabulations of US Department of Labor 2015 Form 5500 Research File
**ERISA 403(b) Plan Activities by Presence of Automatic Enrollment**

Another way to analyze the plan design combinations that employers choose is to look at how remaining plan design features vary while controlling for one feature. This section discusses employer contributions and outstanding participant loans, comparing their incidence in large ERISA 403(b) plans with and without automatic enrollment. The data are explored this way because, for example, the participation results achieved with automatic enrollment may also be reflecting the influence of other plan features.

Plans with automatic enrollment are more likely to have both employer contributions and participant loans outstanding than plans without automatic enrollment. In 2015, 59 percent of large ERISA 403(b) plans with automatic enrollment had employer contributions and outstanding participant loans, compared with 43 percent of plans without automatic enrollment (Exhibit 1.13). Nevertheless, employer contributions are similarly likely in large ERISA 403(b) plans with automatic enrollment: in 2015, 81 percent of large ERISA 403(b) plans with automatic enrollment had employer contributions, the same as in plans without automatic enrollment. A similar pattern is observed across plan sizes, although plans with more participants tend to be more likely to have employer contributions and outstanding participant loans whether or not they also automatically enroll participants.

### Exhibit 1.13

CHAPTER 2
ERISA 403(b) Plan Investment Menu Design

Employers in the nonprofit sector choose whether or not to offer 403(b) plans to their employees, and if so, how to design their plans to attract and retain qualified workers. These design choices include the number and types of investment options in the plan, whether to contribute to the plan and whether to incentivize employees to contribute by matching their contributions, and whether and how to automatically enroll new employees into the plan. This chapter explores the investment menus that employers have chosen for 403(b) plans and how investments vary by plan size in the BrightScope Defined Contribution Plan Database. The database contains detailed information from audited Form 5500 reports for large ERISA 403(b) plans that filed Schedule H (typically plans with 100 participants or more). This chapter analyzes plans from the BrightScope database with $1 million or more in plan assets.

Number and Types of Investment Options
Historically, the investment menus of 403(b) plans have included multiple providers, each offering their full complements of mutual funds or annuity products. As regulations have changed to impose a stronger plan structure and to encourage plan sponsors to take more responsibility in selecting an appropriate investment lineup, the number of investment options on the core menu has declined. Brokerage windows providing access to mutual funds and annuity products may still be offered, in some cases to keep legacy investment options available while providing a simpler choice structure for participants. To reflect this evolution, this chapter will primarily focus on what appear to be core offerings in ERISA 403(b) plans.
Analysis of all investments held in large ERISA 403(b) plans in the BrightScope Defined Contribution Plan Database finds that participants had 42 investment options, on average, in 2015 (Exhibit 2.1). Larger ERISA 403(b) plans tended to offer more investment options, on average, than smaller plans. For example, among plans with $1 million to $10 million in plan assets, the average number of investments offered was 38; that rose to 118 investment options for plans with more than $1 billion in plan assets. Because plans may offer suites of target date funds with options tailored to multiple anticipated retirement dates, this report also includes an adjusted number that counts a suite of target date funds as one investment option. On average, large ERISA 403(b) plans offered 34 options according to this target date fund–adjusted number, ranging from 32 investment options for plans with $1 million to $50 million in plan assets to 99 investment options for plans with more than $1 billion in plan assets. Many of these investment options in large ERISA 403(b) plans hold a small share of total plan assets.

* This measure counts an entire suite of target date funds as one investment option for plans offering target date funds. A target date fund typically rebalances its portfolio to become less focused on growth and more focused on income as it approaches and passes the target date of the fund, which is usually included in the fund’s name. A suite will cover a range of anticipated retirement dates.

Note: The sample is 3,730 plans with $380.2 billion in assets. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. Investment options include mutual fund, variable annuity, and fixed annuity options. In this exhibit, all investments held in a plan are counted.

Source: BrightScope Defined Contribution Plan Database
At one time, 403(b) plans tended to have large lists of investment options, often including multiple providers’ platforms. As regulations governing 403(b) plans changed, curated lists of investment options have become more common. Legacy options may present a skewed picture of the investment options that participants have to choose from. This report primarily focuses on core investment options—those that hold at least 0.5 percent of total plan assets—to correct for this. The average number of core investment options was 27 among large ERISA 403(b) plans in 2015 (Exhibit 2.2). Just as with all investment options, larger ERISA 403(b) plans tended to offer more core investment options. For example, the average number of core investment options offered by plans with $1 million to $10 million in plan assets was 25, compared with 42 core investment options among plans with more than $1 billion. Counting a suite of target date funds as one investment option, ERISA 403(b) plans offered 19 core investment options, on average, in 2015.

Note: The sample is 3,730 plans with $380.2 billion in assets. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. Investment options include mutual fund, variable annuity, and fixed annuity options. Core investment options are those that have at least 0.5 percent of plan assets. The funds in a target date fund suite are included if at least 0.5 percent of plan assets are invested in that suite.

Source: BrightScope Defined Contribution Plan Database
In addition to the variation in number of core investments offered by plan size, there is considerable variation between plans. For example, 10 percent of large ERISA 403(b) plans offer 16 or fewer core investment options and plans at the 90th percentile offer 40 core options (Exhibit 2.3, upper panel). Plans show considerable variability even with a target date fund-adjusted measure, ranging from 11 core options to 28 core options at the 10th and 90th percentiles (Exhibit 2.3, lower panel).

Note: The sample is 3,730 plans with $380.2 billion in assets. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. Investment options include mutual fund, variable annuity, and fixed annuity options. Core investment options are those that have at least 0.5 percent of plan assets. The funds in a target date suite are included if at least 0.5 percent of plan assets are invested in that suite.

Source: BrightScope Defined Contribution Plan Database
Domestic equity funds, international equity funds, and domestic bond funds were the most likely core investment options to be offered in large ERISA 403(b) plans in 2015. Nearly all plans offered these types of funds, which can be mutual funds or variable annuities (Exhibit 2.4). In addition, about two-thirds of plans offered money funds in their core investment lineups. Forty-five percent of plans offered non-target date balanced funds, and more than eight in 10 plans offered target date funds in their core investment lineups. Eighty-eight percent of plans offered fixed annuities, and three-quarters of large ERISA 403(b) plans had other core investments. Eleven percent of large ERISA 403(b) plans had international bond funds in their core investment lineups.

Most core investment types showed little variation in their availability by plan size. However, larger ERISA 403(b) plans were more likely to offer other investments, fixed annuities, or target date funds in their core investment lineups. For example, 56 percent of large ERISA 403(b) plans with $1 million to $10 million in plan assets offered other investments in their core investment lineups, compared with 91 percent of plans with more than $1 billion (Exhibit 2.4). Similarly, 81 percent of plans with $1 million to $10 million in plan assets offered fixed annuities in 2015, compared with 95 percent of plans with more than $1 billion. Seventy-four percent of large ERISA 403(b) plans with $1 million to $10 million in plan assets offered target date funds in their core investment lineups, compared with 97 percent of plans with more than $1 billion.

1 A target date fund typically rebalances its portfolio to become less focused on growth and more focused on income as it approaches and passes the target date of the fund, which is usually included in the fund's name.

2 Other includes commodity funds, real estate funds, and brokerage accounts.

Note: The sample is 3,730 plans with $380.2 billion in assets. Participant loans are excluded. Funds include mutual funds and variable annuities. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. Investment options include mutual fund, variable annuity, and fixed annuity options. Core investment options are those that have at least 0.5 percent of plan assets. The funds in a target date fund suite are included if at least 0.5 percent of plan assets are invested in that suite.

Source: BrightScope Defined Contribution Plan Database
Equity funds were the most common core investment option in 2015, with large ERISA 403(b) plans offering 11 funds on average, of which nine were domestic equity funds and two were international equity funds (Exhibit 2.5). Larger plans tended to offer more core equity funds—plans with $1 million to $10 million in plan assets offered 11 core equity funds compared with 14 offered by plans with more than $1 billion in plan assets. The next most common category in large ERISA 403(b) core investment lineups in 2015 was balanced funds, with 10 funds offered on average, most of which (nine funds) were target date funds. Larger ERISA 403(b) plans tended to have more core target date funds for two reasons. First, larger plans tended to be more likely to offer core target date funds (Exhibit 2.4). Second, larger plans offered more funds as part of their core target date fund suites on average. For example, among large ERISA 403(b) plans with more than $1 billion in plan assets, the average core target date fund suite included around 13 funds (20.0 target date funds divided by 1.6 target date fund suites) (Exhibit 2.5). For plans with $1 million to $10 million in plan assets, the average core target date fund suite included around eight funds (6.6 target date funds divided by 0.8 target date fund suites). On average, there were about nine target date funds (9.2 target date funds divided by 1.0 target date fund suites) in a core suite across all plans in the sample.

In 2015, large ERISA 403(b) plans included about three bond funds (mostly domestic) in their core investment lineups, on average (Exhibit 2.5). Plans also offered core money funds, fixed annuities, and other options. These investments were often included as the single choice in that investment type. Larger plans tended to be somewhat more likely to offer these options in their core lineups (Exhibit 2.4).

¹ A target date fund typically rebalances its portfolio to become less focused on growth and more focused on income as it approaches and passes the target date of the fund, which is usually included in the fund’s name.

² Other includes commodity funds, real estate funds, and brokerage accounts, but each separate option is counted as a unique investment option.

³ This measure counts an entire suite of target date funds as one investment option for plans offering target date funds.

(¹) = less than 0.05 percent

Note: The sample is 3,730 plans with $380.2 billion in assets. Participant loans are excluded. Funds include mutual funds and variable annuities. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. Investment options include mutual fund, variable annuity, and fixed annuity options. Core investment options are those that have at least 0.5 percent of plan assets. The funds in a target date fund suite are included if at least 0.5 percent of plan assets are invested in that suite. Exhibit A.4 in the appendix shows the average number of a given core investment option offered by plans that have at least one of that investment option.

Source: BrightScope Defined Contribution Plan Database
It is instructive to consider availability and then the number of core investment options by investment category contingent on that investment category being offered in the 403(b) plan’s core lineup. For example, domestic equity funds are not only widely available, with nearly all large ERISA 403(b) plans including them in their core investment lineups in 2015 (Exhibit 2.6, upper panel), but also, when they are an option, multiple domestic equity funds—nine on average—are offered (Exhibit 2.6, lower panel).

Investment Vehicles

When choosing which investment options to offer, employers also choose the investment vehicles (for example, mutual funds, variable annuities, or fixed annuities) for these options. Mutual funds were the most common investment vehicle in large ERISA 403(b) plans in the BrightScope database, representing 54 percent of assets in 2015 (Exhibit 2.7). Variable annuities held an additional 24 percent of assets, followed by fixed annuities with 22 percent.

Aggregate Asset Allocation

Although employers choose the investment options offered in 403(b) plans, participants generally choose where to allocate the money in their accounts among such options. In 2015, equity funds held the largest share (43 percent) of large ERISA 403(b) assets in the BrightScope database, with the bulk invested in domestic equity funds (Exhibit 2.8). Fixed annuities held the next largest share with 22 percent of ERISA 403(b) plan assets. Balanced funds also held 22 percent of assets—which were divided between target date funds (19 percent of assets) and non-target date balanced funds (3 percent of assets). Bond funds (mostly domestic) held 7 percent of assets, and money funds held 2 percent. Participants in larger plans (as measured by plan assets) tended to have less of their assets invested in non-target date balanced funds. For example, participants in large ERISA 403(b) plans with $1 million to $10 million in plan assets had 7 percent of their assets invested in non-target date balanced funds, compared with about 2 to 3 percent for participants in plans with more than $10 million in plan assets. Average asset allocation tended not to vary much by plan size for other asset classes.

Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. Row percentages may not add to 100 percent because of rounding.

Source: BrightScope Defined Contribution Plan Database
Large ERISA 403(b) plans have become increasingly likely to offer target date funds. In 2015, 81 percent of large ERISA 403(b) plans offered target date funds in their core investment lineups, compared with 51 percent in 2009 (Exhibit 2.9, upper panel). The share of participants who were offered core target date funds increased to 84 percent in 2015, from 71 percent in 2009 (Exhibit 2.9, middle panel). The share of plan assets invested in target date funds also increased, rising to 19 percent in 2015 from 7 percent in 2009 (Exhibit 2.9, lower panel).

Index Funds

Index funds, which are funds that track a market index (e.g., S&P 500 funds), generally claimed a greater share of assets in larger ERISA 403(b) plans than in smaller plans. On average, 21 percent of large ERISA 403(b) assets were invested in index funds in 2015, but this fraction ranged from about 15 percent of assets in plans with $1 million to $250 million in plan assets to about 25 percent in plans with more than $500 million (Exhibit 2.8, upper panel). Similarly, 12 percent of assets in large ERISA 403(b) plans with fewer than 100 participants were invested in index funds, compared with 29 percent of assets in plans with 10,000 participants or more (Exhibit 2.8, lower panel).

The share of large ERISA 403(b) plan assets invested in index funds has risen since 2009, when 10 percent of assets were invested in index funds (Exhibit 2.10, lower panel). This rose to 21 percent in 2015. Index funds were offered nearly universally in large ERISA 403(b) plans with more than $10 million in assets in 2015 (Exhibit 2.10, upper panel).

\(^1\) Core index funds are index funds that have at least 0.5 percent of plan assets.

\(^2\) In the calculation of index fund assets, all index funds in the plan are counted.

Note: Samples are 3,697 plans in 2009 and 3,730 plans in 2015. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. An index fund is designed to track the performance of a market index. The fund’s portfolio of securities is either a replicate or a representative sample of the designated market index. Funds include mutual funds and variable annuities.

Source: BrightScope Defined Contribution Plan Database
Employers offering 403(b) plans typically hire service providers to assist in operating the plans, and those service providers charge fees for their services. Many types of services are required to operate a 403(b) plan, including administrative services (e.g., recordkeeping and transaction processing), participant-focused services (e.g., participant communication, education, or advice), regulatory and compliance services (e.g., plan document services; consulting, accounting, and audit services; legal advice), annuity processing, and investment management. As with any other employee benefit, the employer typically decides how the costs will be shared. In order to cover the expenses of providing a 403(b) plan, fees are paid by the plan itself, the employer, and/or the plan participants. These fees can be levied based on the number of participants, the amount of assets, or as a fixed dollar amount for the plan as a whole. In order to better understand the impact of fees, BrightScope has developed a total plan cost measure that includes all fees on the audited Form 5500 reports as well as fees paid through investment expense ratios (see the box below).

**Total Plan Cost**

When looking at overall 403(b) plan fees, it is important to consider the sample to be analyzed. Fees can be calculated at the plan level (where each plan is treated equally), at the participant level (where each participant is treated equally), or at the asset level (where each dollar is treated equally). Because the average plan tends to be small, and the average participant and average dollar are in larger plans, the particular focus of the fee analysis can produce different answers. For this reason, total plan cost is presented on a plan-weighted, participant-weighted, and asset-weighted basis.

In 2015, the average large ERISA 403(b) plan in the BrightScope sample had a total plan cost of 0.71 percent of assets, while the average participant was in a plan with a total plan cost of 0.57 percent of assets, and the average dollar was in a plan with a total plan cost of 0.49 percent of assets (Exhibit 3.1). This pattern occurs for a couple of reasons. First, participants and assets tend to be concentrated in larger plans. For example, although only 2 percent of audited large ERISA 403(b) plans in the BrightScope Defined Contribution Plan Database have more than $1 billion in plan assets, more than one-fifth of participants are in these plans, and they hold more than one-third of assets (see Exhibit I.4). A similar pattern occurs in the DOL 403(b) universe.

---

**ABOUT BRIGHTSCOPE’S TOTAL PLAN COST**

*Total plan cost* includes asset-based investment management fees, asset-based administrative and advice fees, and other fees (including insurance charges) from the Form 5500 and audited financial statements of 403(b) plans covered by ERISA. When plans use products registered under the Investment Company Act of 1940—such as mutual funds—expense data from Lipper are used to calculate fees.
Another reason that participant-weighted and asset-weighted total plan costs are lower than plan-weighted total plan cost is because larger plans tend to have a lower total plan cost when measured as a percentage of plan assets. For example, large ERISA 403(b) plans with $1 million to $10 million in plan assets had an average total plan cost of 0.94 percent of plan assets in 2015, compared with 0.52 percent of plan assets for plans with more than $100 million to $250 million and 0.42 percent of plan assets for plans with more than $1 billion (Exhibit 3.1, upper panel). Similar patterns occur for both the participant-weighted and asset-weighted numbers. One reason that larger plans tend to have lower fees is related to the greater share of their assets invested in index funds (Exhibit 2.10), which tend to have lower expenses than other types of investments (Exhibit 3.3). In addition, there are fixed costs associated with offering a 403(b) plan. As a plan grows in size, those fixed costs can be spread over more participants and a larger asset base, lowering the total plan cost as a percentage of assets.

* Total plan cost is BrightScope’s measure of the total cost of operating the 403(b) plan and includes asset-based investment management fees, asset-based administrative and advice fees, and other fees (including insurance charges) from the Form 5500 and audited financial statements of ERISA-compliant 403(b) plans. Total plan cost is computed only for plans with sufficiently complete information.

Note: The samples are 1,587 plans with $146.6 billion in assets in 2009 and 3,602 plans with $368.6 billion in assets in 2015. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis.

Sources: BrightScope Defined Contribution Plan Database and Lipper
Since 2009, large ERISA 403(b) total plan cost has decreased on average by about 10 basis points whether measured on a plan-, participant-, or asset-weighted basis (Exhibit 3.1). For example, total plan cost decreased from 0.82 percent in 2009 to 0.71 percent in 2015 on a plan-weighted basis, from 0.68 percent to 0.57 percent on a participant-weighted basis, and from 0.59 percent to 0.49 percent on an asset-weighted basis. All plan size groups saw declines in total plan cost between 2009 and 2015.

Large ERISA 403(b) total plan costs varied around the plan-weighted average of 0.71 percent in 2015. For example, 10 percent of plans had a total plan cost of 0.47 percent or less, while another 10 percent had a total plan cost of 1.12 percent or more (Exhibit 3.2). Although there is significant diversity in total plan cost, the difference between the 10th percentile and 90th percentile plans tends to decrease as plan size increases. For example, in large ERISA 403(b) plans with $1 million to $10 million in plan assets, total plan cost for 80 percent of plans ranged between 0.52 percent and 1.42 percent of assets. For plans with more than $1 billion in plan assets, that range was significantly narrower, varying from 0.30 percent of assets to 0.52 percent.

* Total plan cost is BrightScope’s measure of the total cost of operating the 403(b) plan and includes asset-based investment management fees, asset-based administrative and advice fees, and other fees (including insurance charges) from the Form 5500 and audited financial statements of ERISA-compliant 403(b) plans. Total plan cost is computed only for plans with sufficiently complete information.

Note: The sample is 3,602 plans with $368.6 billion in assets. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis.

Sources: BrightScope Defined Contribution Plan Database and Lipper

**FEES PAID ON MUTUAL FUNDS HELD IN 403(b) PLANS**

BrightScope’s database of ERISA 403(b) audited Form 5500 filings contains reporting of mutual fund holdings by share class in DC plans for about 50 percent of the plans in the database. In the remaining cases where the mutual fund is known, but not the specific share class, BrightScope assigns a share class to the mutual fund holdings in a given plan based on the size of the plan’s investment in the mutual fund. If the plan has less than $1 million invested in the mutual fund, a retail-type share class is assigned to the holding. If the plan has $1 million or more invested in the mutual fund, then an institutional-type share class is assigned. Lipper and Morningstar fee data were used for the total expense ratios of mutual funds. Because BrightScope has plan-level information, it is possible to report how mutual fund fees vary across plan size and in aggregate.
**Mutual Fund Expenses in Large ERISA 403(b) Plans**

Some of the main costs of a 403(b) plan are the expenses associated with the investments in the plan. Therefore, it is important to understand factors associated with these expenses (such as plan size or investment objective).

**Mutual Fund Expenses by 403(b) Plan Size**

In 2015, the asset-weighted average expense ratios of mutual funds in large ERISA 403(b) plans in the BrightScope Defined Contribution Plan Database varied both with the size of the plan (with larger plans, measured by assets, tending to have concentrated assets in mutual funds with lower expense ratios) and the type of investment (with domestic mutual funds tending to have lower expense ratios than international mutual funds, and money market mutual funds tending to have lower expense ratios than equity or bond mutual funds) (Exhibit 3.3).

The asset-weighted average expense ratio for domestic equity mutual funds held in large ERISA 403(b) plans in 2015 was 0.47 percent of assets, ranging from 0.65 percent in 403(b) plans with $1 million to $10 million in plan assets to 0.43 percent in plans with more than $1 billion (Exhibit 3.3, upper panel). Expense ratios for international equity mutual funds held in large ERISA 403(b) plans were higher compared with domestic mutual funds, with an asset-weighted average of 0.57 percent of assets, ranging from 0.82 percent of assets in 403(b) plans with $1 million to $10 million in plan assets to 0.51 percent in plans with more than $1 billion. Expense ratios for mutual funds tended not to vary as much for plans with different numbers of participants (Exhibit 3.3, lower panel).

In large ERISA 403(b) plans, the average expense ratios for domestic bond mutual funds were lower than domestic equity mutual fund expense ratios (0.39 percent of assets for domestic bond mutual funds, compared with 0.47 percent of assets for domestic equity mutual funds in 2015), but expense ratios for international bond mutual funds were significantly higher than for international equity mutual funds (0.68 percent of assets for international bond and 0.57 percent of assets for international equity mutual funds in 2015) (Exhibit 3.3). Money market mutual funds had the lowest expense ratio of any of the asset classes, with an asset-weighted average expense ratio of 0.15 percent of assets in 2015 for money market mutual funds in large ERISA 403(b) plans.

Index mutual funds, which tend to be domestic equity index mutual funds, tended to have lower expense ratios than other fund types. For example, the asset-weighted average expense ratio for index mutual funds in ERISA 403(b) plans was 0.16 percent of assets in 2015, compared with 0.47 percent of assets for domestic equity mutual funds (including both index and actively managed funds) (Exhibit 3.3). Like other mutual fund types, index mutual funds also tend to have lower expense ratios in larger plans. For example, index mutual funds in large ERISA 403(b) plans with $1 million to $10 million in plan assets had an average expense ratio of 0.30 percent of assets, compared with 0.14 percent in plans with more than $500 million in plan assets. Similarly, index mutual funds in large ERISA 403(b) plans with fewer than 100 participants had an asset-weighted average expense ratio of 0.32 percent of assets, compared with 0.13 percent in plans with 5,000 participants or more.

* A target date fund typically rebalances its portfolio to become less focused on growth and more focused on income as it approaches and passes the target date of the fund, which is usually included in the fund’s name.

Note: The sample is 3,069 plans with $254.6 billion in mutual fund assets. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. See Fees Paid on Mutual Funds Held in 403(b) Plans on page 45 for a description of the fee analysis. The underlying expense ratios of variable annuity mutual funds are included.

Sources: BrightScope Defined Contribution Plan Database, Lipper, and Morningstar
Mutual fund expenses decreased between 2009 and 2015 in large ERISA 403(b) plans across all asset classes, according to the cross-sectional data. For example, domestic equity mutual funds had an asset-weighted average expense ratio of 0.47 percent in 2015, down from 0.56 percent in 2009 (Exhibits 3.3 and 3.4). Money market mutual funds experienced the largest decline in expenses, falling from 0.38 percent of assets in 2009 to 0.15 percent in 2015. This decline in money market mutual fund expenses was slightly larger for smaller 403(b) plans, which tended to have higher expenses to begin with. For example, in large ERISA 403(b) plans with $1 million to $10 million in plan assets, expenses on money market mutual funds decreased by 27 basis points between 2009 and 2015, falling from 0.43 percent to 0.16 percent of assets. However, plans in all size categories experienced decreases in their money market mutual fund expenses on average. For example, in large ERISA 403(b) plans with more than $1 billion in plan assets, money market mutual fund expenses declined by 20 basis points between 2009 and 2015, falling from 0.35 percent of assets to 0.15 percent. Some of the decline in money market mutual fund asset-weighted average expenses may be attributable to fee waivers, which increased substantially in money market funds due to the low interest rate environment following the market turmoil of 2008.38

* A target date fund typically rebalances its portfolio to become less focused on growth and more focused on income as it approaches and passes the target date of the fund, which is usually included in the fund’s name.

Note: The sample is 2,816 plans with $98.9 billion in mutual fund assets. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. See Fees Paid on Mutual Funds Held in 403(b) Plans on page 45 for a description of the fee analysis. The underlying expense ratios of variable annuity mutual funds are included.

Sources: BrightScope Defined Contribution Plan Database, Lipper, and Morningstar.
Variation in Mutual Fund Expenses

In addition to the average expense ratio, it is important to examine different points in the distribution of expenses to understand the range of mutual fund expenses paid in large ERISA 403(b) plans. For example, while the asset-weighted average expense ratio on domestic equity mutual funds held in large ERISA 403(b) plans was 0.47 percent in 2015 (Exhibit 3.3), 10 percent of assets were invested in funds with expense ratios of 0.05 percent or less, and 10 percent of assets were invested in funds with expense ratios of 0.80 percent or more (see Exhibits 3.5 and A.5). Similar patterns were observed for international equity mutual funds.

Although 403(b) equity mutual fund expenses tend to decrease as total assets in a 403(b) plan increase, mutual fund expenses vary in plans of all sizes. For example, expenses for equity mutual funds ranged from 0.22 percent at the asset-weighted 10th percentile to 1.19 percent at the asset-weighted 90th percentile in large ERISA 403(b) plans with $1 million to $10 million in plan assets (see Exhibits 3.5 and A.5). Similarly, equity mutual fund expenses in large ERISA 403(b) plans with more than $1 billion in plan assets ranged between 0.04 percent of assets at the asset-weighted 10th percentile to 0.78 percent at the asset-weighted 90th percentile.

The range in expenses is at least partly attributable to differences in the portion of the expense ratio that is used for shareholder services. For example, though some or all costs associated with plan recordkeeping can be paid by fees associated with the mutual fund investment, other costs may be paid as a per-participant charge by participants or the employer. Expenses also may be paid through a combination of these methods. In addition, the expense ratios applicable to funds vary within a given investment category. For example, actively managed mutual funds can offer investors the chance to earn superior returns, access specialized sectors, or take advantage of alternative investment strategies, all of which can make a fund more expensive to manage. Similarly, equity mutual funds may be priced differently depending on the extent to which they invest in small-cap, mid-cap, or emerging market stocks (which tend to be more expensive to manage) instead of large-cap or developed market stocks (which tend to be less expensive to manage).
EXHIBIT 3.5

Distribution of Mutual Fund Expense Ratios Paid by Large ERISA 403(b) Plan Participants

10th percentile, median, and 90th percentile asset-weighted mutual fund expense ratios as a percentage of plan assets among plans with audited 403(b) filings in the BrightScope database by investment objective and plan assets, percent (2015)

- Median
- 10th to 90th percentile range

* A target date fund typically rebalances its portfolio to become less focused on growth and more focused on income as it approaches and passes the target date of the fund, which is usually included in the fund’s name.

Note: The sample is 3,069 plans with $254.6 billion in mutual fund assets. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. For detailed expense information, see Exhibit A.5 in the appendix. See Fees Paid on Mutual Funds Held in 403(b) Plans on page 45 for a description of the fee analysis. The underlying expense ratios of variable annuity mutual funds are included.

Note: The sample is 5,833 plans with 5.7 million participants and $382.6 billion in assets. The results include plans that filed Form 5500 Schedule H (typically plans with 100 participants or more) and had $1 million or more in plan assets. Plan design features include employer contributions, automatic enrollment, and participant loans. A plan was determined to allow participant loans if any participant had a loan outstanding at the end of plan year 2015. Row components may not add to 100 percent because of rounding.

1. A target date fund typically rebalances its portfolio to become less focused on growth and more focused on income as it approaches and passes the target date of the fund, which is usually included in the fund’s name.

2. **Other** includes commodity funds, real estate funds, and brokerage accounts, but each separate option is counted as a unique investment option.

Note: The sample is 3,730 plans with $380.2 billion in assets. Participant loans are excluded. Funds include mutual funds and variable annuities. Audited 403(b) filings generally include plans with 100 participants or more. Plans with less than $1 million in plan assets are excluded from this analysis. Investment options include mutual fund, variable annuity, and fixed annuity options. Core investment options are those that have at least 0.5 percent of plan assets. The funds in a target date fund suite are included if at least 0.5 percent of plan assets are invested in that suite.

4 See Giller 2009 and Richardson and Gallagher 2010.

5 See Richardson and Gallagher 2010. Keim and Mitchell 2016, studying the defined contribution plan at a large nonprofit institution, explores the benefits of streamlining defined contribution plan investment lineups.

6 As of 2009, 403(b) plans falling under ERISA were required to file participation and financial information. This new reporting requirement led to an increase in the number of 403(b) plan participants and assets reported. ERISA 403(b) plan assets jumped from $1.5 billion in 2008 to $203.2 billion in 2009 (see US Department of Labor, Employee Benefits Security Administration 2012a and 2015c).

7 For example, see Clark and Richardson 2010; Yakoboski and Conley 2013; and Clark and Hanson 2013.

8 See https://oapi.trs.state.tx.us/FOTB/do/memberWebListByCompanySetup.

9 This exhibit reports total 403(b) plan assets estimated by ICI (see Investment Company Institute 2018b) and total ERISA 403(b) plan assets estimated from the BrightScope Defined Contribution Plan Database in 2015 (see Exhibit I.4). The total ERISA 403(b) plan estimates from the BrightScope Defined Contribution Plan Database are different than the totals published by the Department of Labor (see US Department of Labor, Employee Benefits Security Administration 2018a) because of late filers and other data amendments that may have occurred since the publication of the Department of Labor results.

10 Though the Form 5500 is a joint form with the Pension Benefit Guaranty Corporation (PBGC) and Internal Revenue Service (IRS), the Department of Labor (DOL) gathers and processes the information from the regulatory reports. See US Department of Labor, Employee Benefits Security Administration, “Forms and Filing Instructions.”

11 The US Department of Labor Form 5500 Research Files are available at www.dol.gov/agencies/ebsa/researchers/data/private-pension-plan-data.

12 For more information on filing requirements, see US Department of Labor, Employee Benefits Security Administration 2012b.

14 For example, see Richardson and Bisette 2014 and Goodman and Richardson 2014.

15 For example, see Clark and Richardson 2010.

16 Although the Department of Labor defines large plans as those that file Schedule H (typically plans with 100 participants or more), this report also restricts the sample to those with $1 million or more in plan assets.

17 403(b) plan participants also may have access to account assets through withdrawals. The Form 5500 filings do not have information on the plan design features surrounding withdrawal activity. There are two possible types of in-service withdrawals from DC plans: nonhardship and hardship. Generally, participant withdrawals after age 59½ are categorized as nonhardship withdrawals. A participant seeking a hardship withdrawal must demonstrate financial hardship and generally faces a 10 percent penalty on the taxable portion of the withdrawal. If a plan allows loans, participants are generally required to first take a loan before they are permitted to take a hardship withdrawal. For DC plan participants' withdrawal activity, see Holden and Schrass 2018.
The plan sponsor also generally selects the default investment option. Plan Sponsor Council of America 2017 reports the different default investment options selected among their member plans with automatic enrollment.

For example, see Plan Sponsor Council of America 2017. For similar analysis of 401(k) plans, see Deloitte Consulting LLP 2017a and 2017b; and Holden et al. 2018. The Vanguard Group also releases an annual report focusing on defined contribution plans in its recordkeeping system. For the most recent report, focusing on 2017 plan data, see Utkus and Young 2018.

The Form 5500 is an annual disclosure submitted to the US Department of Labor by ERISA-covered employer-sponsored retirement plans, including ERISA 403(b) plans. The filings include information on plan assets, covered employees, contributions, withdrawals, loans, and automatic enrollment. For tabulations from the most recent release of Form 5500 data, see US Department of Labor, Employee Benefits Security Administration 2018a.

Although the Department of Labor defines large plans as those that file Schedule H (typically plans with 100 participants or more), this report also restricts the sample to those with $1 million or more in plan assets.

Plan Sponsor Council of America 2017 reports that 85.4 percent of 403(b) plans in their survey offered employer contributions in 2016.

For this analysis, ICI gathered employer contribution structures from a random sample of 3,132 large ERISA 403(b) plans with employer contributions for plan year 2014. In plan year 2014, 79.7 percent of large ERISA 403(b) plans had employer contributions.

In cases where a plan has multiple employer contribution formulas for different employees, the classifications in this report are based on the contribution formula that was judged to apply to the typical participant.

Since the enactment of Social Security, Congress has allowed private-sector employers to account for Social Security in their pension plans. This process—known as integration—permits a higher benefit formula or a higher employer contribution rate on earnings not covered by Social Security. Permitted disparity—the provision in the tax code that allows Social Security integration—is defined in Section 401(l) of the Internal Revenue Code. See US Department of the Treasury, Internal Revenue Service 2010 and Perun 2002 for a discussion of Social Security integration. Perun 2002 finds that, as of 1997, more than one out of four private-sector defined benefit (DB) plans were integrated and about one in four private-sector DC plans were integrated. Because integrated private-sector DB plans tend to be larger than average, about 42 percent of private-sector DB participants were in an integrated plan in 1997. The study was not able to determine the exact proportion of private-sector DC participants in integrated plans, but because most integrated DC plans in the 1997 sample were very small (75 percent had fewer than 20 participants), fewer than one in four private-sector DC participants were in integrated plans.

Plans also may allow withdrawals (see note 17).

Participant loans generally must be paid back within five years; however, loans for the purchase of a principal residence may qualify for a longer repayment period. Participants who separate from employment with an outstanding loan may be required to repay the loan shortly after separation. Otherwise, the outstanding balance is deemed distributed and potentially subject to taxation and penalties. For more information, see Internal Revenue Service 2018.

Although the Form 5500 data do not contain the amount of loans defaulted in any given year, in plan year 2015, outstanding participant loans made up only 0.7 percent ($2.8 billion) of the $405.5 billion in large ERISA 403(b) plan assets (see US Department of Labor, Employee Benefits Security Administration 2018a).
Research on the impact of the availability of a loan feature on 401(k) plan participation and contributions has found either positive effects or no discernable impact, depending on the study. For example, Beshears et al. 2010 finds that adding a loan option increases 401(k) plan participation, but does not find a conclusive impact on contributions. Mitchell, Utkus, and Yang 2007 finds no impact of loans on participation rates, but concludes that the loan option increases the contribution rate by 10 percent among non–highly paid participants. Regression analysis in US Government Accountability Office 1997 finds that—controlling for firm size, the employer match rate, and the presence of another pension plan—a loan provision was associated with a participation rate that was about 6 percentage points higher, and a 36.8 percent higher average employee deferral rate. Holden and VanDerhei 2001 and Munnell, Sundén, and Taylor 2000 find that the presence of a loan provision increases 401(k) participant contribution rates.

Plans are classified as having a loan provision if any participant in the plan has an outstanding loan balance. This may underestimate the number of plans offering loans because some plans may have offered a loan option, but no participant had taken out a loan.

Plan Sponsor Council of America 2017 reports that 70.2 percent of 403(b) plans in their survey allowed loans.

Participant loan balances outstanding from large ERISA 403(b) plans in plan year 2015 totaled $2.8 billion, which is less than 1 percent of large ERISA 403(b) plan assets (see note 28).

Defined contribution retirement plans are one of many employee benefits an employer may choose to offer.

For a discussion of the economics, services, and fees in 401(k) plans, see Holden, Duvall, and Chism 2018.

Funds for which fee data were not available have been excluded. In addition, the audited Form 5500 reports contain share class data for approximately half of funds in the BrightScope database. For the remainder, if a plan’s investment in a fund was less than $1 million in assets, it was assumed that the plan was invested in retail-type shares (A shares or their equivalents), while a plan’s investment of $1 million or more in a fund was assumed to be invested in institutional-type shares (institutional shares or their equivalents). The impact of this assumption was tested by assigning to each fund the simple average expense ratio of all of its share classes. This tends to increase the average expense ratios presented, but does not significantly alter the remaining analysis (whether comparing across asset categories or across number of plan participants).

At year-end 2017, 66 percent of index mutual fund assets were invested in domestic equity indexes, 16 percent were in world equity indexes, and the remaining 19 percent were in bond and hybrid indexes. See Table 42 in Investment Company Institute 2018a.

In 2015, money market mutual funds waived $5.5 billion in expenses, down slightly from $6.3 billion in 2014, but up from $1.8 billion in 2008. For more information, see Duvall and Mitler 2018.

For example, for a discussion of the range of services offered in S&P 500 index funds, see Collins 2005.
The BrightScope/ICI Defined Contribution Plan Profile: A Close Look at ERISA 403(b) Plans, 2015

Glossary

**automatic enrollment**
The practice of enrolling eligible employees in a plan and initiating participant deferrals unless the employee opts out.

**automatic increase**
A provision found in some defined contribution plans in which an employee's contribution rate is automatically increased at a preestablished point in time, unless the employee chooses otherwise.

**defined contribution (DC) plan**
An employer-sponsored retirement plan, such as a 401(k) plan or a 403(b) plan, in which contributions are made to individual participant accounts. Depending on the type of DC plan, contributions may be made by the employee, the employer, or both. The employee's benefits at retirement or termination of employment are based on the employee and employer contributions and earnings and losses on those contributions. See also 401(k) plan and 403(b) plan.

**eligible plan participant**
Any employee who is eligible to participate in and receive benefits from a plan.

**employer contribution**
A contribution made by the company to the account of the participant (often in the form of a company match based on a ratio to contributions made by the participant).

**ERISA**
The Employee Retirement Income Security Act of 1974 is a federal law governing private-sector employee benefit plans.

**expense ratio**
A measure of what it costs to operate a fund—disclosed in the prospectus and shareholder reports—expressed as a percentage of its assets.

**fixed annuity**
An investment contract sold by an insurance company. Capital is accumulated at a specified rate of interest with the option to convert to an income stream in retirement.

**Form 5500**
An annual disclosure submitted to the US Department of Labor by ERISA-covered employer-sponsored retirement plans, including 401(k) and certain 403(b) plans.

**Form 5500 audited filing**
An independently audited report generally required by federal law for ERISA-covered employer-sponsored retirement plans with 100 participants or more.

**401(k) plan**
An employer-sponsored retirement plan that enables employees to make tax-deferred contributions from their salaries to the plan. See also defined contribution (DC) plan.

**403(b) plan**
An employer-sponsored retirement plan that enables employees of universities, public schools, and nonprofit organizations to make tax-deferred contributions from their salaries to the plan. See also defined contribution (DC) plan.

**fund**
A pooled investment product. In this report, funds include mutual funds and variable annuities.

**index fund**
A fund designed to track the performance of a market index. The fund's portfolio of securities is either a replicate or a representative sample of the designated market index. Often referred to as passively managed portfolios.
**mutual fund**
An investment company registered with the Securities and Exchange Commission that buys a portfolio of securities selected by a professional investment adviser to meet a specified financial goal (investment objective). Mutual funds can have actively managed portfolios, in which a professional investment adviser creates a unique mix of investments to meet a particular investment objective, or passively managed portfolios, in which the adviser seeks to track the performance of a selected benchmark or index. One hallmark of mutual funds is that they issue redeemable securities, meaning that the fund stands ready to buy back its shares at their current net asset value (NAV).

**plan assets**
The total assets held among all participants within the plan.

**recordkeeper**
A recordkeeper maintains plan records; processes employee enrollment; processes participants’ investment elections, contributions, and distributions; and issues account statements to participants.

**target date fund**
A balanced fund that follows a predetermined reallocation of risk over a working career and into retirement for a person expecting to retire at the target date of the fund (which is usually included in the fund’s name). These funds invest in a mix of asset classes and typically rebalance their portfolios over time to become less focused on growth and more focused on income as the fund approaches and passes the target date. Also known as a *lifecycle fund*.

**total plan cost**
BrightScope’s measure of the total cost of operating a DC plan, which includes asset-based investment management fees, asset-based administrative and advice fees, and other fees (including insurance charges) from the Form 5500 and audited financial statements of ERISA-covered DC plans.

**variable annuity**
An investment contract sold by an insurance company. Capital is accumulated, often through mutual fund investments, with the option to convert to an income stream in retirement.

BrightScope is a Strategic Insight business, providing data and analytics through the SI Data division. BrightScope drives the growth of data-driven decision-making at leading financial services firms. BrightScope builds best-in-class software solutions facilitating more effective sales and retention strategies for top financial institutions. BrightScope works with eight of the top 10 asset managers by US open-end assets, and eight of the top 10 defined contribution plan recordkeepers. BrightScope maintains a database with information on more than 60,000 defined contribution plans, largely gathered from Department of Labor Form 5500 audited filings.

Strategic Insight (SI) provides critical and proprietary data, business intelligence, research and marketing services to the global asset management community. SI delivers full service solutions to the asset management sector worldwide, including investment flow data, advisor sales analysis, in-depth research, analytics, editorial content and events for investment managers, asset owners and custodians, plus Transaction Cost Measurement of over 500 million trades per month. Strategic Insight clients include over 1,000 of the most prominent names in the asset management industry, including 83 of the world’s 100 largest fund managers. Strategic Insight delivers its products and services through four distinct divisions: SI Data, SI Research, SI Intelligence and SI Interactive. Its portfolio of leading editorial titles includes the well-recognized brands PLANSPONSOR, PLANADVISER, Chief Investment Officer, Global Custodian, and The Trade. The company’s headquarters are in New York with offices in Boston, Denver, San Diego, San Francisco, Stamford, CT; London; Munich; Melbourne; Toronto and Vancouver. Strategic Insight is backed by Genstar Capital.

The Investment Company Institute (ICI) is the leading association representing regulated funds globally, including mutual funds, exchange-traded funds (ETFs), closed-end funds, and unit investment trusts (UITs) in the United States, and similar funds offered to investors in jurisdictions worldwide. ICI seeks to encourage adherence to high ethical standards, promote public understanding, and otherwise advance the interests of funds, their shareholders, directors, and advisers.
