Defined Contribution Plan Participants' Activities, 2012

Sarah Holden, ICI Senior Director of Retirement and Investor Research, and Daniel Schrass, ICI Associate Economist, prepared this report.

Key Findings

DC plan withdrawal activity in 2012 remained low and was similar to the prior year's activity. In 2012, 3.4 percent of DC plan participants took withdrawals, the same pace as in 2011. Levels of hardship withdrawal activity also remained low. Only 1.7 percent of DC plan participants took hardship withdrawals during 2012, the same share as in 2011.

The already small share of participants that stopped making contributions in 2012 was slightly lower than the share that stopped contributing in 2011. In 2012, 2.6 percent of DC plan participants stopped contributing, compared with 2.8 percent during 2011.

Most DC plan participants stayed the course with their asset allocations as stock values generally rose throughout the year. In 2012, 9.7 percent of DC plan participants changed the asset allocation of their account balances and 6.6 percent changed the asset allocation of their contributions. These levels of reallocation activity are in line with the activity observed a year earlier.

DC plan participants' loan activity edged down slightly in 2012, although it continues to remain elevated compared with four years ago. At the end of December 2012, 18.2 percent of DC plan participants had loans outstanding, compared with 18.5 percent at year-end 2011 and 18.2 percent at year-end 2010.

Introduction

Defined contribution (DC) plan assets are a significant component of Americans' retirement assets, representing more than one-quarter of the total retirement market (Figure 1) and almost one-tenth of U.S. households' aggregate financial assets at year-end 2012.¹ To measure participant-directed changes in DC plans, ICI has been tracking participant activity through recordkeeper surveys since 2008. This report updates results from ICI's survey of a cross section of recordkeeping firms representing a broad range of DC plans and covering nearly 24 million

Trillions of dollars; end-of-period, 2007-2011, 2012:Q1-2012:Q4

¹ Annuities include all fixed and variable annuity reserves at life insurance companies less annuities held by IRAs, 403(b) plans, 457 plans, and private pension funds (including 401(k) plans).

² Federal pension plans include U.S. Treasury security holdings of the civil service retirement and disability fund, the military retirement fund, the judicial retirement funds, the Railroad Retirement Board, and the foreign service retirement and disability fund. These plans also include securities held in the National Railroad Retirement Investment Trust and the Federal Employees Retirement System (FERS) Thrift Savings Plan (TSP).

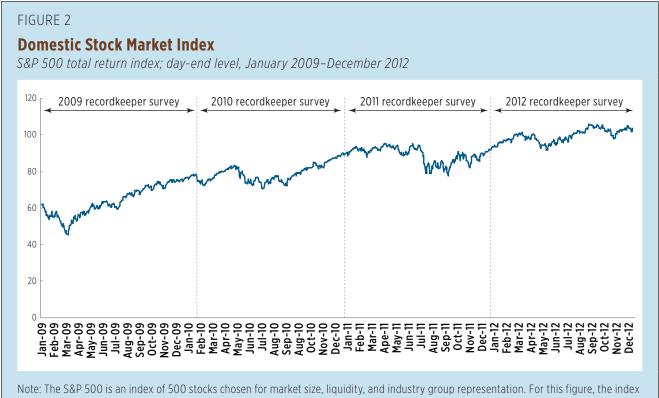

³ Other DC plans include 403(b) plans, 457 plans, and private employer-sponsored DC plans without 401(k) features.

employer-based DC retirement plan participant accounts as of December 2012. The broad scope of the recordkeeper survey provides valuable insights about recent withdrawal, contribution, asset allocation, and loan decisions of participants in these plans. The most recent survey covered DC plan participants' activities in 2012. In this period, stock prices generally rose (Figure 2); on net, the S&P 500 total return index was up 16.0 percent in 2012. Stock market price movement influences investors' perceptions about risk and may prompt some to reevaluate their asset allocation.²

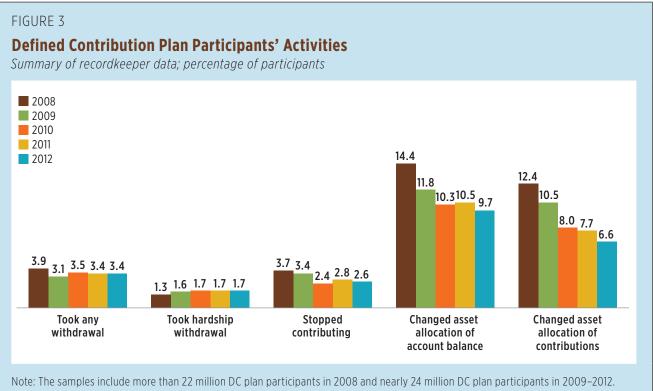

is set to 100 in October 2007.

DC Plan Participants' Activities in 2012

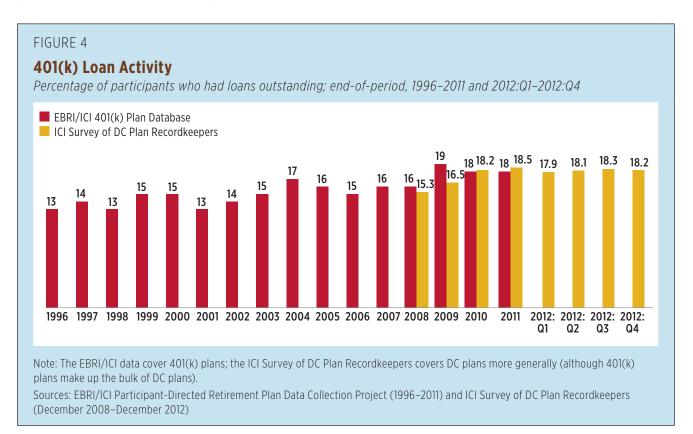

The withdrawal and contribution data indicate that essentially all DC plan participants continued to save in their retirement plans at work. DC plan participants' withdrawal activity³ during 2012 was in line with activity observed in the prior year, and a negligible share of participants stopped contributing during 2012.⁴ In 2012, 3.4 percent of DC plan participants took withdrawals from their DC plan accounts, with 1.7 percent taking hardship withdrawals (Figure 3).⁵ These levels of activity are similar to 2011. The share of participants that stopped making contributions in 2012 was slightly lower than the share that stopped contributing in 2011. In 2012, 2.6 percent of DC plan participants stopped contributing, compared with 2.8 percent in 2011. It is possible that some of these participants stopped contributing simply because they reached the annual contribution limit.

The survey of recordkeeping firms also gathered information about asset allocation changes in DC account balances or contributions. During 2012, 9.7 percent of DC plan participants had changed the asset allocation of their account balances, compared with 10.5 percent in 2011 (Figure 3).⁶ Reallocation activity regarding contributions was slightly lower in 2012 compared with the prior year: 6.6 percent of DC plan participants had changed the asset allocation of their contributions in 2012, compared with 7.7 percent in 2011.

Loan activity edged down a bit in 2012, after rising from the end of 2008 through 2011.⁷ This pattern of activity is similar to that observed in the wake of the bear market and recession earlier in the decade (Figure 4).⁸ The sample of recordkeepers reported that as of December 2012, 18.2 percent of DC plan participants had loans outstanding, compared with 18.5 percent at year-end 2011, and 15.3 percent at year-end 2008.

Notes

- ¹ Total financial assets of U.S. households were \$54.4 trillion at year-end 2012. See Federal Reserve Board 2013.
- ² For example, see Schrass, Bogdan, and Holden 2012 and Holden, Bass, and Reid 2011.
- ³ The withdrawal rates observed for 2012 (3.4 percent of DC plan participants with withdrawals; 1.7 percent with hardship withdrawals) were the same as those observed in 2011, which were in line with past years' experiences among the recordkeepers and the rate of withdrawal activity observed in the EBRI/ICI 401(k) database in 2000 (at the beginning of the 2000–2002 bear market in equities). The Employee Benefit Research Institute (EBRI) and ICI collaborate on an annual 401(k) data collection project. Analysis of the 2000 EBRI/ICI 401(k) database found that 4.5 percent of active 401(k) plan participants had taken in-service withdrawals, including hardship withdrawals. Withdrawal activity varied with participant age; participants younger than 60 were much less likely to take withdrawals compared with participants in their sixties. See Holden and VanDerhei 2002.
- ⁴ The recordkeepers typically remove participants who are no longer working for the employer sponsoring the plan. It would not be correct to include such separated, retired, or terminated participants, because they cannot contribute. The goal of the survey is to measure the activity of active DC plan participants.
- ⁵ There are two types of withdrawals possible from DC plans: nonhardship and hardship. An in-service withdrawal occurs if the participant is still employed by the plan sponsor. Generally, participants withdrawing after age 59½ are categorized as nonhardship withdrawals. A participant seeking a hardship withdrawal must demonstrate financial hardship and generally faces a 10 percent penalty on the taxable portion of the withdrawal. If a plan allows loans, participants are generally required to first take a loan before they are permitted to take a hardship withdrawal.
- ⁶ Annual rates of account balance reallocation activity observed in the ICI Survey of DC Plan Recordkeepers for 2008, 2009, 2010, 2011, and 2012 are consistent with the behavior observed in earlier years in other data sources. Historically, recordkeepers find that in any given year, DC plan participants generally do not rebalance in their accounts (for references to this research, see note 80 in Holden, Brady, and Hadley 2006; and note 32 in Holden et al. 2012 for a discussion of changes in asset allocation).
- ⁷ The EBRI/ICI 401(k) database update reports loan activity among 401(k) participants in plans that allow loans. At year-end 2011, 87 percent of participants in the database were in plans that offer loans; among those participants, 21 percent had loans outstanding at year-end 2011. This translates to 18 percent of all active 401(k) participants having loans outstanding. The year-end 2011 EBRI/ICI database includes statistical information about 24.0 million 401(k) participants in 64,141 plans, with \$1.415 trillion in assets. See Holden et al. 2012.
- ⁸ The National Bureau of Economic Research dates the recession earlier in the decade to have occurred between March 2001 and November 2001. The latest recession was dated to have occurred between December 2007 and June 2009. See National Bureau of Economic Research 2010.
